Use case status at a glance

Which use case works, which lacks API information, and which has no backend. Status as of 2026-10-12.

How sure is this: the status comes from the live single-turn runs of 2026-10-06 and 2026-10-07 (every use case asked five ways, English) and the transfer probe of 2026-10-07. Fixes made after those runs (complaint routing, transfer wording) were checked by unit tests only. Multi-turn flows across the 14 intents have not been run live, and not every use case has been re-run on the final build.

Handled as: Answer in chat = bot looks it up · Change in chat = bot does it after yes/no or a code · Gather -> box = bot collects details, app shows a prefilled box · App action -> box = bot makes no bank call, app shows a box · Info only = text only.

Empty lists: the test customer's lists (disputes, complaints, requests, gifts, email transfers, QR history, beneficiaries) are all empty, so the field layout of a non-empty entry has not been seen for any of them. Confirm the row fields with real data before finalising the list cards.
